

Task 1 – Adverse Drug Reaction (ADR) Identification Basics

Patient Information

Age: 45 years **Gender:** Female

Presenting Symptoms

- Rash
- Itching
- Nausea
- Dizziness

Medication History

Medication	Details
Amoxicillin	Started 5 days ago
Paracetamol	Taken as needed

Timeline

- **Day -5:** Amoxicillin was started.
- **Day -2:** Symptoms began.
- **Day 0:** Symptoms are still present.

ADR Analysis

The patient's symptoms developed approximately three days after starting amoxicillin, showing a possible temporal relationship between the medicine and the symptoms. The presence of rash and itching is suggestive of a possible hypersensitivity/allergic reaction to amoxicillin. Nausea and dizziness can also occur as adverse effects of medicines.

Suspected Drug: Amoxicillin

Suspected Reaction: Possible amoxicillin-induced hypersensitivity/allergic reaction

Assessment of Paracetamol

Paracetamol is less likely to be the suspected drug because it was taken only as needed, while the timeline shows a clearer relationship between starting amoxicillin and the onset of symptoms.

Conclusion

Amoxicillin is the suspected drug responsible for the possible ADR. The reaction is considered possibly drug-related, based mainly on the temporal relationship and the occurrence of rash and itching after starting amoxicillin.

Patient Safety

The patient should be medically evaluated promptly. If facial or lip swelling, difficulty breathing, wheezing, or worsening dizziness occurs, urgent medical attention is required because these may indicate a serious allergic reaction.

Short Explanation

The suspected ADR is associated with amoxicillin. The patient developed rash, itching, nausea, and dizziness three days after starting amoxicillin. The temporal relationship and the presence of rash and itching suggest a possible hypersensitivity reaction to amoxicillin. Paracetamol is less likely to be the suspected drug. Therefore, amoxicillin is identified as the suspected drug, and the reaction should be appropriately assessed and reported.
